Dear American Express Hiring Team,

I was excited to hear about your Technology Software Engineer Full Time position posted recently on the American Express career site. I would be ecstatic to return to American Express as a full-time software engineer since completing the American Express internship program in 2019. While at American Express, I felt welcomed and able to learn in an amazing and inspiring culture.

This position aligns perfectly with my goal of becoming a senior engineer one day? I began coding as a senior in high school in AP Computer Science and immediately fell in love. I will be receiving my Bachelor's degree in computer science at the University of Miami this May. In addition to my degree in computer science, I am pursuing a major in interactive media with a minor in math. I am confident that my firm understanding of Java, C++, HTML & CSS, JQuery, React, and python has prepared me well for making an immediate contribution to your team. For the past three summers I have held positions where I taught programming or worked in the industry including front-end web development at GoDaddy and American Express. During the summer of 2018, I held a job as a coding instructor at 6 Points Sci Tech Academy where I taught children ages ten to sixteen Java, HTML, CSS, and JQuery. Not only that, in 2017 I held a two-week internship with GlowTouch Technologies, which provided a solid foundation in acquiring the basics of HTML & CSS.

The prospect of launching a career in software engineering is exciting, and I hope to continue the journey at American Express. I believe my determination to tackle new challenges and my passion in the field of computer science make me an ideal candidate and more importantly an asset to the American Express technology department. Thank you for your consideration, and I look forward to hearing from you soon.

Sincerely,

Isabelle Geller
